Registering for Courses on Populi

Adding Courses

1. Log into Populi (<https://prgs.populiweb.com>)
2. Once logged in, click on the bell icon at the top right of the screen – there will be a message stating that registration is open; click on the alert to go to the registration page.

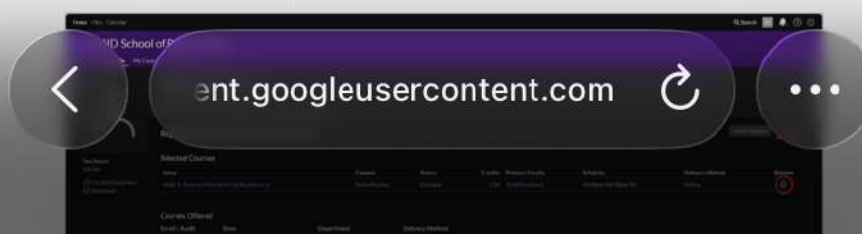

3. On the registration page, there will be a list of available courses. Click on the course name to view the course's homepage and view the course information. If you would like to add the course to your course list, click the green plus sign. A popup window will appear that will allow you to confirm your enrollment.
 - **For MNSP and MTP students only:**
 - If you are a **full-time student**, please register for four units of coursework – please review the Sample Full-Time Schedules section of this document before making your course selections.
 - If you are a **part-time student**, please register for up to 3.5 units of coursework. You must be enrolled in at least two units to be eligible for Federal Student Loans.
4. Classes you add will appear at the top of the page – but you aren't done. Your enrollment will not be complete unless you click the "Save" button. An email will be sent to your account once you have completed the full registration process.

Dropping Courses

1. To drop a course, return to the registration tab and click on the trash can icon under the "Remove" Column. Your class will not be dropped unless you click the save button. An email will be sent to your account once you have dropped a course.

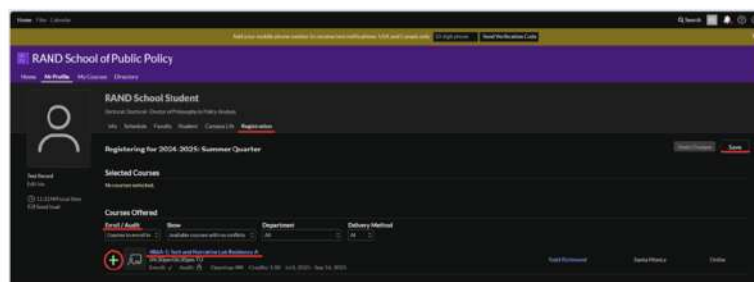

2 of 2

On the registration page, there will be a list of available courses. Click on the course name to view the course's homepage and view the course information. If you would like to add the course to your course list, click the green plus sign. A popup window will appear that will allow you to confirm your enrollment.

Course Offerings and Registration

Attached to this email is a list of classes available for the upcoming quarter. Please review the course list, paying attention to the notes at the end of each course describing eligibility and registration requirements. Our program is designed so that no course has prerequisites, allowing you flexibility in planning your schedule.

I've also attached an MNSP Graduation Tracker worksheet. You can use it to help plan your classes and ensure you meet requirements to graduate on your timeline.

Fall registration will begin on Monday, August 18. Tomorrow, you will receive information on how to register for classes in Populi from Kelsey Horrigan, the school's Registrar.

Please also note that the MNSP program is an in-person program. When reviewing the list, take note of where classes are offered. When a class is offered on your campus, you must take it on your campus in person. If it is not offered on your campus and the class is hybrid, you can sign up for the course remotely.

Important Note for Full-Time Students:

If you plan to complete the MNSP program in one year and graduate in the spring, you must enroll in the following three courses this fall:

• Introduction to National Security Policy

Sent on Behalf of Raphael Cohen

to me

Aug 14, 2025 [Details](#)

Dear Incoming MNSP Students,

It is my pleasure to welcome you to the RAND School of Public Policy! Whether you are joining us in Santa Monica or Washington, DC, we are excited to have you as part of our vibrant academic community. You are embarking on a journey that will challenge and inspire you, and we look forward to supporting you as you develop the skills and insights needed to address some of the most pressing national security issues of our time.

My name is Rafi Cohen, and I serve as the director of the National Security Program at the RAND School. In addition to my role as program director, I am also the director of the Strategy and Doctrine Program of RAND Project AIR FORCE. My career has spanned over two decades in national security, including research fellowships at leading institutions, service as a staffer on the National Defense Strategy Commission, and two combat tours in Iraq as a military intelligence officer. I am currently a colonel in the Army Reserve. Directing this program and working with all of you is an opportunity I truly relish.

Aug 11, 2025 [Details](#)

Stephen Ackerman:

Very interesting article from The New Yorker by Dexter Filkins, "The Next War." It provides a nice walk through and raises several questions -- both technological and strategy for conflicts going forward -- looking at Ukraine and Israel and working back to technology discovery, development, and procurement. It also quotes RAND's David Ochmanek. Reading former AF and DoD officials from relevant offices, it tells me our procurement and funding strategies need to align better with the technology needs to develop and incorporate asymmetric approaches to low-level and other "irregular" conflicts.

<https://www.newyorker.com/podcast/the-new-yorker-radio-hour/dexter-filkins-on-drones-and-the-future-of-warfare>

Thanks!

Important Note for Full-Time Students:

If you plan to complete the MNSP program in one year and graduate in the spring, you must enroll in the following three courses this fall:

- Introduction to National Security Policy
- Implementing Good Ideas
- Emerging Technology and National Security

Taking these courses in the fall is essential to staying on track for spring graduation.

In general, I encourage all students to begin fulfilling distribution requirements early—this includes empirical methods courses (National Security Research Methods and Introduction to Quantitative Analysis are offered this fall), regional studies (such as Latin American Security and Indo-Pacific Security, both offered this fall), and functional classes (like Economic Statecraft and National Security). You will also have the opportunity to select electives throughout your time with us.

In the next week or two, you will receive an email from our registrar, Kelsey Horrigan, with detailed instructions on how to register for classes using our system, Populi. If you haven't already logged in, please do so ahead of time to ensure a smooth registration process. If you have questions, please email registrar@rand.org.

Program: MNSP/MTP

Course Type: Distributional - Methods

Course Name: Introduction to Quantitative Analysis

Faculty Name: Elie Alhajjar

Campus: DC

Delivery Method: Hybrid - in-person in DC, Virtual for SM

Course Description:

This course is to provide students with foundational knowledge in quantitative statistics, emphasizing the principles of statistics and data analysis. The course will focus on the statistical concepts and techniques used to collect, analyze, and interpret data, equipping students with the skills needed to make informed decisions based on empirical evidence. The course will highlight the practical application of statistical methods across various fields such as business, economics, and social sciences. Additionally, students will

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

learn to use statistical software tools to manage and analyze data effectively. The course is designed to be interactive, encouraging students to engage in hands-on projects and data analysis exercises.

Students will also have the opportunity to present a data-driven research project on a topic of their choosing, applying the quantitative techniques learned throughout the course. By the end of the course, students will acquire a robust understanding of statistics and data analysis, ready to apply these skills in academic and professional settings.

Additional Notes: This course is only open to MNSP and MTP students.

Program: MNSP

Course Type: Core Coursework

Course Name: Introduction to National Security Policy

Faculty Name: Raphael Cohen

Campus: DC

Delivery Method: In-person only

Course Description:

This course introduces students to the theory and practice of national security. It seeks to answer a basic question: how do states (and primarily the United States) control, develop and use force to accomplish their national objectives?

The course is divided into four sections. First, it will introduce military strategy and its relationship to military power. Second, it will then look at the primary actor in this course—the military—and delve into a series of questions, ranging from how the military interacts with civilians to how the military learns (or does not learn). Third, the course will explore how states can use different types of force and the threats of force—from airpower to economic coercion—to accomplish their national objectives. Finally, the course concludes by looking at the future of war and strategy in the twenty-first century.

By the end of this course, students should be able to:

- Understand the basic debates about military strategy in the modern era
- Develop a framework for analyzing what the use of force can and cannot accomplish
- Apply these concepts to current and future conflicts

Additional Notes: This course is only open to MNSP students.

Program: MNSP

Course Type: Core Coursework

Course Name: Introduction to National Security Policy

Faculty Name: Ted Harshberger

Campus: SM

Delivery Method: In-person only

Additional Notes: This course is only open to MNSP students.

Program: MNSP

Course Type: Distributional - Functional

Course Name: Economic Statecraft and National Security Policy

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

As we appreciate the challenges that government leaders face, we will ask ourselves if there are practical things we can do make implementation easier and more likely. We will consider a provocative proposition: as we serve organizations by analyzing problems and proposing solutions, we are leading organizational change at the intellectual level. Rather than being dispassionate and independent of the organization we are serving, we must assume we are an integral part of the change management required to solve the problem. To do this well, we need to become "scholar practitioners" of organizational change. Moreover, we need to apply this lens as we do the work, write the report, and deliver the findings.

Along the way, we will examine several real-world case studies that illustrate the challenge in very practical terms. These case studies set the stage for our discussions as they illustrate the challenges at a practical level, and they also show how some people dealt with these challenges.

We will concentrate on the dynamic within the Department of Defense and its environment, but many of the issues we examine are widely applicable to the U.S. government and others around the globe.

By the end of the course, you will be better able to serve an organization with your analytical skills, and you will be less likely to see multiple copies of your report collecting dust on a shelf.

Additional Notes: This course is only open to students in all programs (with priority given to MNSP and MTP students).

Program: MNSP/MTP

Fall 2025 Courses*Courses subject to change or canceled due to low enrollment***Program:** MNSP/MTP**Course Type:** Core Coursework**Course Name:** Emerging Technology and National Security**Faculty Name:** Tom Wingfield**Campus:** DC**Delivery Method:** Hybrid - in-person in DC, Virtual for SM**Course Description:**

Through this course, students will acquire language and develop approaches for understanding emerging technology within the context of society, acquire language and develop approaches for understanding emerging technology within the context of national security, and articulate the different ethical perspectives at the intersection of emerging technology for national security.

Additional Notes: This course is only open to students in all programs (with priority given to MNSP and MTP students).

Program: MNSP/MTP**Course Type:** Core Coursework**Course Name:** Implementing Good Ideas**Faculty Name:** Angel O'Mahony**Campus:** SM**Delivery Method:** In-person only**Course Description:**

You found the solution, and you feel really good about it.

When you first got this analysis assignment for the (insert government agency here), you were not sure how to start—it was such a complex and intractable problem, with many conflicting restraints and constraints. You sought out advice, you recruited the help of a support team, and you applied your training. You scoped the project, researched the contributing factors, adopted an insightful model, and did the analysis. Now, after months of work, you have the answer. You are scheduled to brief the findings and recommendations to the project sponsor next week, and you are ready.

But there is a gnawing concern. Will this solution be implemented?

The hard truth is, it probably won't be.

In this course, we will examine what happens after the problem is scoped, the analysis is done, the report is written, and the findings are delivered to the "decision maker." (And we will discuss why we might want to put "decision maker" in quotes).

There are many reasons why a good solution may not be implemented—some obvious, and some not so much. We will spend several weeks describing these reasons. As we do this, we want to build a sense of empathy for the people who receive the report and try to implement its recommendations. It's important that we appreciate some of the pressures that these leaders face, especially when recommendations lead to major changes in an organization's structure and culture. It takes great energy and focus to lead change in the government, and sometimes leading change can be quite risky at both the professional and personal levels.

Fall 2025 Courses*Courses subject to change or canceled due to low enrollment*

As we appreciate the challenges that government leaders face, we will ask ourselves if there are practical things we can do make implementation easier and more likely. We will consider a provocative proposition: as we serve organizations by analyzing problems and proposing solutions, we are leading organizational change at the intellectual level. Rather than passively reacting to change, we will actively shape it. We will explore the challenges of leading change in the government, and we will examine several real-world case studies that illustrate the challenge of leading change in the government.

Along the way, we will examine several real-world case studies that illustrate the challenge of leading change in the government.

impact on national security issues in the region. The course will cover key topics such as drug trafficking, immigration, military interventions, and economic instability, exploring how historical events have shaped current security dynamics. Through lectures, case studies, and discussions, students will critically assess U.S. policies and their implications for U.S.-Latin American relations, culminating in a deeper understanding of the region's security challenges.

6 of 14

of ten sessions, students will analyze U.S. foreign policy through the lens of a country they choose for in-depth study. Key assignments include a

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

country case study presentation that explores a pivotal historical event between the U.S. and the chosen country with national security implications, as well as a policy brief focused on a contemporary issue. To further develop their skills in diplomacy and policy-making, students will participate in a structured class debate on a contemporary national security issue facing Latin America, where they will take on roles as diplomats representing various U.S. and Latin American interests. This debate will help students practice negotiation, persuasion, and conflict resolution while deepening their understanding of the complex political dynamics in the region. Additionally, students will have the opportunity to engage with institutions such as the Inter-American Defense Board (IADB) and the Organization of American States (OAS), providing real-world context to their studies. By the end of the course, students will be equipped to develop policy recommendations based on both historical insights and current events and will be prepared to address current U.S.-Latin American security challenges.

Additional Notes: This course is open to MNSP and MPhil/PhD students (with priority given to MNSP students).

Program: MNSP

Course Type: Elective

Course Name: Understanding Nuclear Forces

Faculty Name: Bruce Bennett, Edward Geist

Campus: SM

Delivery Method: Hybrid - in-person in SM, Virtual for DC

Course Description:

After the Cold War, the United States chose to largely ignore nuclear weapons as a national security issue for three decades—the end of the Cold War seemed to make nuclear weapon threats unlikely. But developing threats by Russia, China, North Korea, and Iran, combined with the long delayed U.S. nuclear modernization efforts, have caused nuclear weapons to become a major national security issue which many in the national security community do not really understand.

This course provides an introduction to nuclear weapons, including their past, present, and likely future roles and strategies. It illustrates the weapons themselves, the nature of the developing threats, the analytic procedures used to estimate nuclear weapon effects, the logic of deterrence and nuclear weapon employment, the ongoing U.S. modernization efforts, and the potential requirements for U.S. nuclear weapons in the future. The course will be interactive and will include students preparing a short policy paper on a nuclear weapon force issue of their choosing.

Additional Notes: This course is open to MNSP and MPhil/PhD students.

Program: MTP

Course Type: Core Coursework

Course Name: Introduction to Technology Policy

Courses subject to change or canceled due to low enrollment

Oceania and the Pacific Island Countries, and South and Central Asia) critical to the security of the United States.

The goal of this course is to offer students a survey of many of the key policy issues facing the Indo-Pacific, which may include:

- The role of the United States and the U.S.-centric web of alliances and security cooperation
- The foreign and security policies of America's most capable regional allies Japan, the Republic of Korea, and Australia
- China's growing ambitions, power, and assertiveness
- The political and security policies of Taiwan and the cross-Strait threat posed by China
- The challenges of managing PRC gray zone coercion and the territorial disputes in the East China Sea and South China Sea
- North Korea's expanding military capabilities, especially its missile and nuclear weapons arsenal
- The India-Pakistan relationship and competition among great powers in Afghanistan and Central Asia
- The competition for influence in Southeast Asia and the Pacific Island Countries; and
- How the region's security looks to other key global partners of the United States in Europe and North America.

By the end of the course, students should have a greater appreciation for and awareness of how the Indo-Pacific impacts U.S. security interests, as well as the perspectives of many of the most important actors in the region.

Additional Notes: This course is open to MNSP and MPhil/PhD students (with priority given to MNSP students).

Program: MNSP

Course Type: Distributional - Regional

Course Name: Latin American Security

Faculty Name: Tahina Montoya

Campus: DC

Delivery Method: Hybrid - in-person in DC, Virtual for SM

Course Description:

This graduate-level course examines the complex relationship between Latin America and the United States, focusing on U.S. national security from both historical and contemporary perspectives. Students will explore the historical evolution of U.S. foreign policy and its impact on national security issues in the region. The course will cover key topics such as drug trafficking, immigration, military interventions, and economic instability, emphasizing how historical events have shaped current security dynamics. Through lectures, case studies, and discussions, students will critically assess U.S. policies and their implications for U.S.-Latin American relations, culminating in a deeper understanding of the region's security challenges.

Course Type: Distributional - Functional
Course Name: Economic Statecraft and National Security Policy

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

Faculty Name: Rachel Lyngaas

Campus: DC

Delivery Method: Hybrid - in-person in DC, Virtual for SM

Course Description:

This course covers the dimension of economics that concerns national security policy. We will focus on economic, technological, and financial security issues from their theoretical basis to current practice. Topics will include economic strategy as an instrument of statecraft and the composition of U.S. authorities for national security. We will also discuss specific economic statecraft tools utilized by the United States, including sanctions, embargoes, boycotts, dumping, investment screening, and other forms of economic warfare; the effectiveness of such instruments and of defenses against them. The course will also cover the practical implementation of these tools and policies in the coordination of conventional trade, aid, and development activities with other national security policies, and the legal and bureaucratic processes addressing these various issues within the U.S. government.

Additional Notes: This course is only open to MNSP and MPhil/PhD students (with priority given to MNSP students).

Program: MNSP

Course Type: Distributional - Methods

Course Name: National Security Research Methods

Faculty Name: Caitlin McCulloch

Campus: DC

Delivery Method: Hybrid - in-person in DC, Virtual for SM

Course Description:

The objective of this course is to introduce students to the diversity of different methods used in the study of national security, and equip them with the skills to be intelligent consumers of national security research. This course will combine a review of these methods, discussion of their relative strengths and weaknesses, good and bad applications of them, and worked examples of how these methods can be applied. Students will be asked to conceptualize and write up research designs using different methods, as well as to create basic example coding schemes, models, survey instruments, and wargame plans. Through this class, students will develop a critical understanding of how rigorous research can be conducted, as well as what constitutes sound empirical practice.

Methods covered will include case studies, interviews, surveys, qualitative data analysis, modeling, quantitative data analysis, wargaming, and emerging applications of AI.

Additional Notes: This course is only open to MNSP students.

Courses subject to change or canceled due to low enrollment

Program: MPhil/PhD

Course Type: Foundations

Course Name: Math for Policy Analysis

Faculty Name: Jeanne Ringel

Campus: SM

Delivery Method: Hybrid - in-person in SM, Virtual for DC

Course Description:

This course is a primer in the fundamental principles of mathematics used in Microeconomics, Statistics, Econometrics, Analytic Methods, and other RAND School courses. It is intended for entering RAND School students who do not have strong backgrounds in mathematics and quantitative methods. The Mathematica software package is used to help students understand and interpret the mathematical concepts taught in the course. This course covers: functions, particularly exponential and logarithmic functions, techniques of proof, single variable calculus, linear algebra (vectors, matrices, linear systems), multivariate calculus (integral and differential), sequences and series, optimization.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD

Course Type: Foundations

Course Name: OJT Workshop

Faculty Name: Jeanne Ringel

Campus: SM

Delivery Method: Hybrid - in-person in SM, Virtual for DC

Course Description:

This OJT workshop is designed to provide structure, support, and practical training to ensure students are well-equipped to navigate RAND's internal market, secure sufficient project work, ask for support and feedback as needed, and deliver quality work.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD

Course Type: Foundations

Course Name: STATA bootcamp

Faculty Name: Petra Rasmussen

Campus: SM

Delivery Method: Hybrid - in-person in SM, virtual for DC

Course Description:

Stata is a popular statistical software package that is used by a significant portion of quantitative researchers at RAND and many thousands of researchers in a variety of other settings. Stata is also used to practice/reinforce empirical concepts in the statistics sequence at the RAND School. Thus, acquiring basic skills in Stata will not only foster greater productivity in your coursework, but can also be a valuable part of a student's toolkit when seeking OJT work with researchers at RAND. Stata is a relatively intuitive software to learn since it uses a relatively high-level nomenclature and data is handled in a way that should be intuitive for those with, say, a modest level of experience using spreadsheet software such as Microsoft Excel. Acquiring basic skills using Stata is valuable per se, but is also relevant for those with a desire to learn additional statistical packages, such as R and SAS.

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

Course Description:

This course provides an overview of artificial intelligence (AI) technology and the related policy issues. It also examines approaches to governing advanced and future AI systems with potentially transformative impacts on society, economy, and global power structures. Students will critically analyze recent developments in AI governance, evaluating their efficacy in addressing the potential risks and benefits of advanced AI. Through in-depth case studies, and further analytic approaches, the course will explore methods for managing AI developments and anticipating associated risks. We will then investigate how AI may affect and be affected by international relations and power balances, focusing on potential international governance frameworks and treaties. The course will also cover how technical mechanisms, analysis, and policies can help navigate these challenges. Finally, we will conclude with a critical examination of post-AGI

governance, exploring potential scenarios and persistent challenges in a world where AI systems match or exceed human capabilities across all tasks.

Additional Notes: This course is open to students in all programs (with priority given to MTP students).

Program: MTP

Course Type: Elective

Course Name: Tech & Society

Faculty Name: Todd Richmond

Campus: Virtual

Delivery Method: Fully Virtual

Course Description:

There is little debate over the extensive and entangled relationship between humans, technology and culture. From the printing press to automatic weapons, cyborgs to Facetime, much of human history, and of the future, is only understood through the lens of technology. The emergence and rise in technologies such as artificial intelligence, additive manufacturing, and cryptography, coupled with a growing democratization movement, has resulted in an epoch where policy analysts and policy makers will be ineffective without real-time understanding of technology.

In this course, we will explore the connection between humans, technology and policy. How do we interpret and use the data, networks, and tools in the digital world to gain insights into human behaviors? How do we enable the positive benefits of technology while mitigating its negative consequences? How do policy analysts interpret signals related to human use and interaction with technology to build implementable and resilient policy frameworks?

Additional Notes: This course is open to students in all programs.

Program: MTP

Course Type: Elective

Course Name: Machine Learning and Data Science

Faculty Name: Gabe Hassler and Carter Price

Campus: DC

Delivery Method: Hybrid – in person in DC, virtual for SM

Course Description:

This 10-week course will introduce students to foundational concepts in Machine Learning (ML) practice, building on their prior exposure to probability and statistical concepts. The class will cover the theoretical underpinnings of machine learning practices but focus on practical uses. Students with less quantitative experience will gain exposure to the mathematics behind the basic methods. Students with a significant quantitative background will explore the full life cycle of a data science project and best practices.

Upon completion of this course, a student should understand:

- The workflow for an ML project
- The basic mechanics of key ML techniques
- How these methods fail, and
- How to be a critical consumer of ML analysis.

Additional Notes: This course is only open to MTP students.

Delivery Method: Hybrid - in-person in SM, Virtual for DC

Course Description:

This course examines the development and implementation of technology policy by a complex set of governmental and non-governmental actors. We will analyze policy

7 of 14

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

frameworks, stakeholder dynamics, and decision-making mechanisms that shape how societies seek to leverage the benefits of emerging technologies while managing risks. We will review contemporary case studies in AI, biotech, and other technologies, and look to historical examples, to identify similarities and differences across domains. We will also look ahead and consider approaches for how the policy community can anticipate and manage possible future emerging technology developments and applications.

Additional Notes: This class is only open to MTP students.

Program: MTP

Course Type: Distributional - Technology Deep Dives

Course Name: Space Policy

Faculty Name: Bhavya Lal

Campus: DC

Delivery Method: Hybrid - in-person in DC, Virtual for SM

Course Description:

This dynamic and engaging course provides a high-level overview of the current landscape and future directions of space policy, primarily in the United States. Over ten sessions, students will explore the intricacies of national and international space law, the unexpected role of commercial enterprises, and the growing importance of space in national security. While we will invoke history as needed, this is not a class on the history of space policy but space policy today and of the future, emphasizing the importance of analysis and skepticism in a sector with diverse perspectives and parochial interests.

With a blend of guest speakers, interactive simulations, and rigorous debates, this course equips students with the skills to critically evaluate the sector, and learn enough of the fundamentals of space policy to begin to shape the development and implementation of effective space policy and practice.

Additional Notes: This course is open to students in all programs (with priority given to MTP students).

Program: MTP

Course Type: Distributional - Technology Deep Dives

experimental opportunities are limited and yet the goal is to predict changes in a system. Biostatistics (but not epidemiology) deals with experimental design and analysis, psychometrics with measurement and deriving conceptual ideas, machine learning with predictions. All fields change over time and are prone to fads, but there is deep and stable foundation that is shared by all of them. As you are in an interdisciplinary program, it is important that you see the relationship between similar approaches across disciplines.

This course covers tools and concepts used across fields at an intermediate level, between the basics of the first year sequence and more advanced quantitative courses. And at a minimum, you will learn how to avoid making some very common and yet embarrassing mistakes in the future.

Students should have taken the econometric/statistics sequence before trying this course. It is not a first course in statistics. The mathematical level is not that high, lower than in a graduate econometrics or statistics course, and we do not discuss theorems or prove them. But that doesn't mean the concepts are easy, the concepts are still hard. And we work through concepts, not just teach you how to press buttons as in a programming course.

Linear models are fundamental tools, always a good first approach, and sometimes even all you need. But real data are less cooperative. Outcomes cluster on some values, are top-coded (e.g. income reported in tax returns), are qualitative in nature, relationships are inherently nonlinear. We cover nonlinear statistical models and the basic theory behind them, tools to choose between different models, discusses issues with transformations (common approaches, such as taking logs can cause unexpected problems). The emphasis is on applications and we build models that use several tools simultaneously (e.g. the multi-part models popular in health economics) and combine them into simulation models to predict policy changes.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD **Course Type:** Distributional - Empirical Analysis
Course Name: Empirical Public Finance
Faculty Name: Phil Armour
Campus: SM
Delivery Method: Hybrid - in-person in SM, Virtual for DC
Course Description:

The principal objective of this course is to explore empirical evidence on the role of government intervention in the economy, focusing on tax and social program policies. The course is designed around lectures providing the foundations for each topic area, followed by reading important recent research, with a particular focus on distributional outcomes. This approach is intended to allow students to learn both the subject matter and techniques necessary to critically analyze existing research in the field and to produce original research in public economics, the latter of which is the major goal of the course.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD **Course Type:** Distributional - Modeling Human Systems
Course Name: Risk Management in Energy Markets

Program: MPhil/PhD
Course Name: Microeconomics I - Policy

Course Type: Core Coursework

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD

Course Type: Core Coursework

Course Name: Perspectives in Public Policy Analysis

Faculty Name: Scott Savitz, Krystyna Marcinek

Campus: DC

Delivery Method: In-person only

Course Description:

The purpose of the course is to introduce RAND School students to the profession of public policy analysis and to provide them with an overview of the tools of the trade. This includes describing the general framework, methods, ethics, and professional standards used by policy analysts, as well as techniques for communicating with clients. In short, the course is designed to help students develop a professional identity.

Toward this end, students will be introduced to a broad array of policy problems—from the local to the international level—and how policy analysis can be used to improve decision making. Special attention will be given to the political and historical contexts for decision making.

The course will rely on a combination of lectures and class discussion as well as a series of case studies that illustrate relevant applications. The case studies will draw upon experiences at all levels of government and perhaps even individual institutions.

Additional Notes: This course is only open to MPhil/PhD students.

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

In this 5-week workshop, we will introduce the Stata software package, learn how to navigate the interface, load and explore data, produce replicable data analysis and visualizations, and develop key skills for tackling the types of data exercises you will encounter in your statistics sequence. Included among the skills we will develop in this workshop are:

- understanding the different types of data commonly used in empirical analyses and how Stata handles them;
- navigating the Stata interface and learning to use do-files in a systematic folder structure in order to generate replicable code and analysis;
- loading data from multiple sources including excel files and fixed-width data files (e.g., CSV);
- exploring and cleaning data (e.g., summarizing mean, median, percentiles, one- and two-way tabulations);
- generating data within Stata (e.g., random numbers under various distributions);
- estimating basic bivariate and multivariate regression models;
- generating basic graphical output (e.g., scatter plots, bar charts);
- learning how to use key built-in and user-written Stata packages for more in-depth data manipulation and analysis.

This course is suitable for those with zero to modest existing knowledge of Stata and with some cursory knowledge of basic statistical concepts. The course materials will consist of provided lecture notes/slides, some additional online readings/video tutorials, and exercises.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD

Course Type: Core Coursework

Course Name: Microeconomics I - Policy

Faculty Name: Ismael Ruedas Arcinigas, Marwa AlFakhri

Campus: DC

Delivery Method: In-person only

Course Description:

This is the first of two required courses in microeconomic theory taught in the first year at the RAND School of Public Policy.

At its core, microeconomics is the study of how individuals, firms, and organizations make choices in a world in which resources are scarce. How economic agents make such choices is fundamental to the design and evaluation of public policy.

This course introduces students to the assumptions, mechanics, and implications of the neoclassical economic theories of consumer and producer behavior and the interaction of economic agents in competitive markets.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD

Course Type: Core Coursework

Course Name: Microeconomics I - Policy

Faculty Name: Petra Rasmussen

14 of 14

Delivery Method: In-person only

Course Description:

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

This course aims to connect the applied economic methodologies that students learn in their economics coursework to current research and thus to students' own research. It will do so by leveraging RAND's connection with the broader research community, wrapping around the RAND Economics, Statistics, and Sociology department's Applied Microeconomics seminar series, in which outside economists are invited to present research-in-progress.

Before each seminar, each student and the professor will review the speaker's manuscript and write a brief memo summarizing its strengths and weaknesses, we will attend and participate in the seminar, and we will meet afterward to discuss the choices the authors made, with interested students scheduling meetings with the speakers. The primary aim is to connect the RAND School's economics curriculum with the broader economic research environment, providing insight to students as to how academic preparation informs independent research.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD

Course Type: Elective

Course Name: Tech and Narrative Lab Residency

Faculty Name: Todd Richmond

Campus: Virtual

Delivery Method: Fully Virtual

Course Description:

A combination of individual and small group projects in the Tech + Narrative Lab (TNL) explore a variety of topics, some rotating each quarter, others having a longer trajectory.

The residency includes a documentation aspect in which both the results from the projects, as well as the processes — acquisition of skills/capabilities, problem framing, experimental methods, and preliminary results — are collected, collated, published, and shared with broader RAND (and possibly public) audiences. The focus will be on documentation such as video narratives, animation, and modeling such that students become conversant in a variety of mediums beyond the traditional academic paper or report.

Residency periods do not need to be continuous and can be adapted based on project needs and other factors.

Additional Notes: This course is only open to MPhil/PhD students.

governments' intervention in the economy, focusing on tax and social program policies. The course is designed around lectures providing the foundations for each topic area, followed by important recent research, with a particular focus on distributional concerns. This approach is intended to allow students to learn both the subject matter and techniques necessary to critically analyze existing research in the field and to produce original research in public economics, the latter of which is the major goal of the course.

Additional Notes: This course is only open to MPhil/PhD students.

Program: MPhil/PhD **Course Type:** Distributional - Modeling Human Systems
Course Name: Risk Management in Energy Markets

Fall 2025 Courses

Courses subject to change or canceled due to low enrollment

Faculty Name: Ismael Ruedas Arcinigas

Campus: DC

Delivery Method: Hybrid - in-person in DC, Virtual for SM

Course Description:

This course covers the economic and management aspects of energy markets and the environment. The course includes discussions on different energy markets, the analysis of energy market data, the concept of hedging, and an introduction to basic mathematical/statistical tools to understand how energy markets work. The course addresses environmental aspects related to renewable energy and carbon markets. The course will have a practical approach first, theory will be discussed as needed, and suggested readings on theory and policy will be indicated. As much as possible, an international view will be included. The instructor may invite outside speakers on the topic as possible.

Additional Notes: This course is only open to MPhil, PhD, and MTP students.

Program: MPhil/PhD **Course Type:** Distributional - Modeling Human Systems

Course Name: Modeling Complex Systems

Faculty Name: Raff Vardavas and Paul Davis

Campus: SM

Delivery Method: Hybrid - in-person in SM, Virtual for DC

Course Description:

Econometrics, biostatistics, psychometrics, sociometrics, machine learning—all start from the same principles and there are plenty of shared tools. Econometrics emphasizes causal inference with observational data, which is a natural fit for policy analysis where experimental opportunities are limited and yet the goal is to predict changes in a system. Biostatistics (but not epidemiology) deals with experimental design and analysis, psychometrics with measurement and deriving conceptual ideas, machine learning with predictions. All fields change over time and are prone to fads, but there is deep and stable foundation that is shared by all of them. As you are in an interdisciplinary program, it is important that you see the relationship between similar approaches across disciplines.

Students should have taken the core econometric/statistics sequence before trying this course. A good understanding of linear regression and basic probability theory is needed or you will not get any traction. The mathematical level is not that high, lower than in a graduate econometrics or statistics course, and we do not discuss theorems or prove them. But that doesn't mean the concepts are easy, the concepts are still hard.

ARRIVING TO CAMPUS:

The RAND School's DC Area Campus is co-located with RAND's DC Office at [1200 South Hayes Street](#) in Arlington, Virginia. Metro Tower at Pentagon City is the tall building attached to the Fashion Centre at Pentagon City shopping mall, just off Interstate 395, near both the Pentagon and Reagan National Airport. The building front is located on South Hayes Street in Arlington, to the right of the Ritz Carlton Hotel. Enter the Metro Tower at Pentagon City from the lobby off Hayes Street, to the right of the Ritz Carlton. The lobby entrance will be on your right as you approach the entrance to the mall.

Click [here](#) for more information on metro access, driving directions, and parking.

Please feel free to reach out if you have any questions. We are so excited to see you on campus!

All the best,

John

I formally withdrew from the program earlier this year after multiple attempts to find sustainable paths forward; professionally, financially, and logistically. I was navigating several intersecting opportunities and constraints, and despite my enthusiasm, I had to make a decision that preserved both my dignity and my family's situation.

That said, I remain deeply interested in RAND's mission and intellectual ecosystem. I've continued publishing relevant work in public policy, behavioral intelligence, and security innovation, much of which aligns with the ethos I hoped to bring to RAND.

If this ping was an automated error, no worries at all. If, however, this message signals an opportunity; perhaps tied to work-study, fellowships, or financial avenues I was previously unaware of, I'd be open to re-engaging in good faith.

I never wanted preferential treatment, only an honest conversation. I'm still here, still building, still committed to doing meaningful work, whether with RAND or wherever the signals lead.

Warm regards,

Adriel Willis

Sep 2, 2025 [Details](#)**Dear Director Murphy,**

I appreciate the follow-up, and I genuinely wish the timing and conditions had aligned better when I initially accepted.

I formally withdrew from the program earlier this year after multiple attempts to find sustainable paths forward; professionally, financially, and logistically. I was navigating several intersecting opportunities and constraints, and despite my enthusiasm, I had to make a decision that preserved both my dignity and my family's situation.

That said, I remain deeply interested in RAND's mission and intellectual ecosystem. I've continued publishing relevant work in public policy, behavioral intelligence, and security innovation, much of which aligns with the ethos I hoped to bring to RAND.

If this ping was an automated error, no worries at all. If, however, this message signals an opportunity; perhaps tied to work-study, fellowships, or financial avenues I was previously unaware of, I'd be open to re-engaging in good faith.

Carlton Hotel. Enter the Metro Tower at Pentagon City from the lobby off Hayes Street, to the right of the Ritz Carlton. The lobby entrance will be on your right as you approach the entrance to the mall.

Click [here](#) for more information on metro access, driving directions, and parking.

Please feel free to reach out if you have any questions. We are so excited to see you on campus!

All the best,

John
